

Grading Assignments – Inline Comments

Changes to UNM Learn Inline Grading Tool.

The Assignment tool in UNM Learn is designed to utilize a third-party service for inline grading, which allows instructors to make annotations on student work when grading assignments. Due to a buyout, the previous service, Crocodoc, was discontinued in January. The company, Box, has provided Blackboard with a replacement service called New Box View (labeled “box” in Learn). We migrated to this new service for inline grading, prior to the Crocodoc demise date, on January 6, 2018.

As part of the migration to the new service, all prior annotations made using Crocodoc were saved with the rendered student submission in a fixed format and will be viewable but un-editable. New annotations can be made using New Box View.

New Box View provides a streamlined interface that is accessed in the same way as the old tool. The workflow is similar, but some functionality will differ: see Blackboard's page on [Assignment Inline Grading](#). To see a brief demonstration of the tool, view the [Blackboard Inline Grading](#) video.
